

Algeiba S.A. is a fresh company focused in providing IT Consulting Services and Solutions.

We develop strategic relationships with our clients. Through the optimization and development of their IT infrastructure we settle a commitment with the growth of their business.

Reduce time, costs and risks in your IT initiatives with us.

We would like to join your journey

The innovation and technological changes have a constant and accelerated rhythm.

The companies are facing the uncertainty of which technology to invest money to as well as when are proper time to do so.

We, in Algeiba, are prepared to give you accurate advises while minimizing risks.

The services and solutions that we provide are supported by reliable methodologies and the application of the best IT practices.

Our dedication and professionalism can be clearly seen in our client and strategic partners trust; who have chosen us because we make of IT an effective support for the growth of their business.

Our Quality Guarantee

At Algeiba the quality of our services is guaranteed by the application of methodologies and the certification of our competences.

The adherence to the following methodologies allows us to meet customer expectations, provide the solution or service within the constraints defined (terms, resources, costs), identify relevant risks or problems and handle them in time to assure a delivery without setbacks.

- **Microsoft Operations Framework (MOF):** This model is applied to services in business support. It allows improvements, design of necessary changes and the development of operations while facilitate the procedures and tools that will be used in a later support of IT services and resources. Hereby, planning of the process of maintenance and the reduction/optimization of costs is achieved.

- **Microsoft Solution Framework (MSF):** This framework is used when services are provided as a Project. It represents the foundation of knowledge and resources that guides the development of the structure of the projects, and at the same time, it helps with the technical decisions to be adopted. Likewise, it constitutes a point set of reference to make an effective follow-up of the development of projects by focusing on the management of risks during the whole cycle. This guide facilitates the advantage of using accumulated knowledge and experiences in a consistent and structure manner.

These methodologies help to align technological and business objectives, to reduce costs of using new technologies, and to assure the success when providing our services.

OUR MISSION

Our mission is to facilitate the adoption of new information technology and assure the continuity of existing technology to our clients, through the application of best practices and a profound and reliable specialization of our competences; looking after the development of our employees and the interest of the shareholders.

SHARED VALUES

The shared values that guide us everyday to accomplish our mission are:

- **Team work:** focused on results, terms and expectations of our client.
- **Passion for excellence:** methodology, best practices, more knowledge.
- **Initiative and Creativity:** freedom of action and introduction of improvement proposals.
- **Responsibility and Integrity:** in every action.
- **Respect for the individual:** for their interests, moral integrity and economic, physical and emotional well-being.

IT SOLUTIONS

Microsoft Forefront Security For Business:

This family of solutions embrace your enterprise security in a complete and integrated manner.

Forefront Edge & Access Services is the perimeter security solution, that contains firewall functions, web cache, advanced security server at application level and a VPN concentrator. This solution enables your company to obtain the maximum benefit of the IT investment done, improving the network security and performance, allowing a secure and agile integration with your business partners, and facilitating the access to network resources for your employees, without matter of the place the are located.

Forefront Server Security is the security line for servers. Provides a great protection and control; integrates with your infrastructure in a simple manner. It has multi level protection technology for detection and elimination of threats. (Microsoft Forefront Security for Exchange, Microsoft Forefront Security for SharePoint, Microsoft Forefront Security for Live Communications Server).

Forefront Client Security protects desktops, laptops and servers form new threats that appear like spywares, rootkits and viruses, among others.

ABOUT OUR NAME

Algeiba is one of the biggest and brightest stars in the Leo constellation.

This star is seen of orange color and it is located in the lion's mane; as the lion is traditionally visualized.

The name of our star seems to come from the Arabic "Al Jebbah", which means "The forehead".

At Algeiba we would like to be your guide, your "forehead", envisioning with you the technology that your business needs.
